iSuite Medical Management Software

Web-based system maximizes productivity and integrates products

American Health designed iSuite, our proprietary medical management system, with the goal of creating a completely integrated, centralized system. Using our expertise in medical management and input from our experienced nursing staff, we developed an application that we believe is the best in the industry. As a result of iSuite's impact on our processes and outcomes, we are a preferred provider with multiple stop loss carriers.

iSuite is internet-based and provides the flexibility, efficiency and scalability to support clients and groups with multiple plans. Secure and compliant with HIPAA and HITECH regulations, iSuite's powerful rules and work-flow engine automate the entire medical management process.

iSuite's EZ Reports application provides the ability to generate scheduled or on-demand electronic reports, giving clients control and timely access to data.

System License
American Health also provides the option of a system license, which may include Utilization Management, Case Management and/or Disease Management. Because iSuite is browser-based, the license allows access to robust, compliant technology without the costly installation, set up, maintenance, hardware and software support typically associated with technology investments.

Our iSuite system integrates all proprietary services into a single view of the member, enabling our ability to deliver quality, member-centric care.

- Program Highlights -

Our highly scalable, proprietary system supports the highest level of customization to clients and groups with multiple plans

Ensures compliance with HIPAA through role-based security, encrypted connections and support of the 834 transaction sets

EZ Reports provides clients with direct access to their choice of electronic reporting options

Option of system license provides a cost-effective option for access to powerful technology and support from American Health
